## Chapter 1 : Ecological Imperialism The Biological Expansion Of Europe 900 1900

Ecological imperialism is the theory advanced first by Alfred Crosby that European settlers were successful in colonization of other regions because of their accidental or deliberate introduction of animals, plants, and disease leading to major shifts in the ecology of the colonized areas and to population collapses in the endemic peoples. In ecological imperialism Crosby argues that a major aspect of European imperialism, actually the major aspect, is not their military superiority, which, in some ways, can be seen as over exaggerated. Instead their success in displacing native peoples in the Americas and Australia is due to environmental and biological factors.
