Chapter 1 : Multiphase Flow And Fluidization Continuum And Kinetic Theory Descriptions By Gidaspow Dimitri 1994 01 18 Paperback

The sedimentation of particles is a physically simple, common example of multi-phase flow. multiphase flow and fluidization takes the reader beyond the theoretical to demonstrate how multiphase flow equations can be used to provide applied, practical, predictive solutions to industrial fluidization problems. written to help advance progress Treats fluidization as a branch of transport phenomena; demonstrates how to do transient, multidimensional simulation of multiphase processes; the first book to apply kinetic theory to flow of particulates; is the only book to discuss numerical stability of multiphase equations and whether or not such equations are well-posed Fluidization & multiphase flow. co-sponsored by: applications of solids processing unit operations. transport phenomena and reactor performance ii. sponsored by: fluidization & multiphase flow. checkout. to access the full content in this group, you must first purchase the conference proceedings. Multiphase flow and fluidization: continuum and kinetic theory descriptions - kindle edition by dimitri gidaspow. download it once and read it on your kindle device, pc, phones or tablets. use features like bookmarks, note taking and highlighting while reading multiphase flow and fluidization: continuum and kinetic theory descriptions. Treats fluidization as a branch of transport phenomena demonstrates how to do transient, multidimensional simulation of multiphase processes the first book to apply kinetic theory to flow of particulates is the only book to discuss numerical stability of multiphase equations and whether or not such equations are well-posed explains the origin 186 multiphase flow and fluidization the unsteady flow of current due to capacitive and resistive effects in the matrix. during the sorption period they approximate the solution of the diffusion equation in the matrix by saying that the current decreases roughly as  $1/\sqrt{t}$ , where  $t$  is the time counted from the time the sorption began.
